

.170 GAUGE POLYETHYLENE MUD FLAPS

Almost 3/16" Thick Standard Grade Poly Flap

The **.170 gauge is our most commonly used mud flap**. It is our **economy grade or standard mud flap** because it has the strength to last a long time, **all at the right price**. It is smooth on both sides. Not all polyethylene is created equal. We use polyethylene that has been through further chemical processing, making it more ductile, more elastic, and more resistant to the harsh chemical environment that is the Canadian roadway. All of our polyethylene mud flaps are engineered to withstand the most demanding environments. These flaps perform well from temperatures as low as -40 degrees F to over +100 degrees F. Available in black and white only.

Minimum order for custom imprinting is 50 flaps plus die charges. Die charges waived for orders of 400+ flaps. Three and four color imprinting is available for an additional cost. Our imprinting is done via "Hot Stamping." Magnesium die charge cost is \$350.00 but can increase according to complexity of design and size of image.

Special - Take an extra 10% discount from above price levels on your First Order only.

.250 GAUGE POLYETHYLENE MUD FLAPS

A full 1/4" thick Moderate Grade Poly Flap

These mud flaps are slightly stronger and more durable than our standard mud flaps. Our .250 gauge Polyethylene mud flaps incorporate vertical grooves on most of the back of the flap to channel water safely to the ground. On each side of the flap there is a solid 2 1/4" anti-sail bar feature built in to help prevent curling. **These flaps cost slightly more, but are made to last longer than our economy mud flaps.** Not all polyethylene is created equal. We use polyethylene that has been through further chemical processing, making it more ductile, more elastic, and more resistant to the harsh chemical environment that is the Canadian roadway. All of our polyethylene mud flaps are engineered to withstand the most demanding environments. Performs well in temperatures as low as -40 degrees F to over +100 degrees F. **Rest assured that this mud flap will not disappoint you.** Available in black and white only.

.320 GAUGE POLYETHYLENE MUD FLAPS

Over 5/16" thick Superior Grade Poly Flap

This is our best polyethylene mud flap! It has larger vertical grooves (anti-spray) covering most of the back area which channels water safely down to the ground, and minimizes side spray. Plus it has an even thicker 2 ¼" anti-sail bar feature built into each side, than our .250 gauge flap to help prevent sailing and curling of the flap in heavy winds. Not all polyethylene is created equal. We use polyethylene that has been through further chemical processing, making it more ductile, more elastic, and more resistant to the harsh chemical environment that is the Canadian roadway. All polyethylene mud flaps are engineered to withstand the most demanding environments. These flaps perform well in temperatures as low as -40 degrees F to over +100 degrees F. **You will be completely satisfied with this mud flap!**

.250 GAUGE RUBBER MUD FLAPS

A full 1/4" thick Moderate Grade Rubber Flap

This is our economy rubber mud flap that is very flexible but also has our anti-spray feature built in. It has vertical grooves (anti-spray) covering all of the back area which channels water safely down to the ground, and minimizes side spray. Our rubber mud flaps are formulated from all natural material primarily composed of isoprene polymers. Vulcanization makes our rubber into a much stronger substance capable of withstanding up to years of use on the road. It is a great custom mud flap for dump trucks and gravel trucks. Rubber has a certain look. It hangs a little looser than polyethylene and moves a little more freely. Some people just prefer it that way.

.350 GAUGE RUBBER MUD FLAPS

Almost 3/8" thick Superior Grade Rubber Flap

This is our most popular and “one of the best value superior rubber mud flaps on the market today.” These custom made and formulated mud flaps have both our anti-spray and anti-sail features built in. So you have larger vertical grooves (anti-spray) covering most of the back area which channels water safely down to the ground, and minimizes side spray. Plus you get reinforcing anti-sail features built in on each side to help prevent sailing and curling of the flap in heavy winds. These rubber mud flaps are formulated from all natural material primarily composed of isoprene polymers. Vulcanization makes our rubber into a much stronger substance capable of standing up to years of use on the road. Rubber has a certain look. It hangs a little looser than polyethylene and moves a little more freely. Some people just prefer it that way. **Again you will be completely satisfied with this mud flap for years.**
